EM-6 Under Eaves Mount Bracket

EM-6

Universal Eave Mount *For J Pipe Mounts and Mast installations*

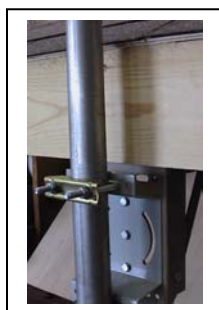

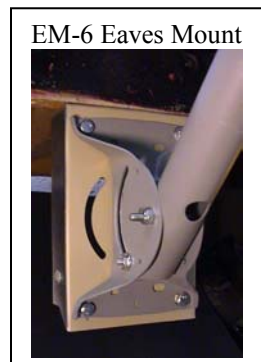

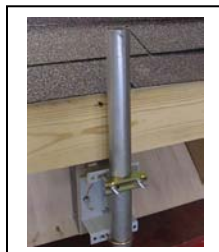

MSRP \$34.95

Professional Heavy Duty Eaves Mount Bracket is designed to lag bolt to the under side of the Eaves. Installers can mount the bracket on the pitch or the horizontal of the eaves. Mount a J-pipe or any of our EM Series mounts. By mounting under the eaves you can get Six Lag Bolts into 2 X 4 in the eaves over hangs. This makes for a rock solid mounting surface. Get around Gutters, Tile Roofs, or any obstruction. No drilling into Siding or roofs.

EM-6

8. Heavy gauge steel
9. Powder coated
10. Mounts Under Eaves at an angle or horizontal
11. **MSRP \$34.95**
12. **Weight: 3 pounds**

Applications & Installations

The EM-6 under eaves mount is installed under the Eaves. The EM-6 can be mounted on the pitch or on the horizontal. Perfect for hip roofs with gutters. The EM-6 makes the job of installing dish antennas easier and faster, while saving time and money

Installation

Locate the cross members under the eaves connecting in between the truss & the outer Eaves fascia. Lag bolt to the 2 X 4's using 6 lag bolts. Bolt the J pipe mount to the face of EM-6. If you mount the EM-6 on the pitch you need the EM-4 Face plate. Apply mast or J pipe to outer plate.
